

Introducing the real time NDI score graphics system, ScoreBox-N

ScoreBox-N is a software only based solution to real time score graphics creation. Based on our SDI hardware system, ScoreBox-N has all the same features and functions, but in a notebook computer package creating NDI video.

Key features include:

Easy to setup, easy to use and easy to change your look without 3rd party intervention.

Integrated OCR processing. No external system required to convert video of a stadium scoreboard to scoreboard data.

RS-232 scoreboard data processing.

Support for the Sportzcast ScoreHub local and cloud data.

DVE can be integrated in to a bug or independently inserted.

“Go to break” function for lower third bumper graphic with current game stats.

Other scores function with auto playback or manual advance.

Up to 30 other scores available each with individual show selection.

Team Names with optional team color or logo graphic.

Comparison Page and Tab function for competing team stats.

Message Box for displaying multi-line text.

Timed Logos—Automatic rotate through a series of logo graphics

Most commonly used functions available through “F” keys.

Supports X-Keys keyboard for user configurable single key operation.

GPI/GPO interface option.

Plus, many other configurable options from the SDI ScoreBox system.

Free updates.

7 Days a week phone support.

Minimum computer requirements:

A PC computer with Windows 10 version 21H2 or later.

8GB ram.

6th generation i3 CPU or faster.

Computer screen resolution of 1920x1080 or higher.

2 open USB ports.

For video in, either an NDI source on the same network or an USB video converter.
